APPLICATION AND USE

The Touch Point VAV 2.0 is a modern room operating unit supporting Modbus RTU/ASCII and BACnet MS/TP communication protocols. Optimized for room comfort control applications in spaces where fan control is not required or handled automatically. The panel combines intuitive operation with an elegant design for modern interiors. Available in different configurations of built-in sensors (temperature, CO^2, and humidity), and colors, all versions are equipped with a display and capacitive touch interface. The panel can be configured using the iSMA Configurator software or via Modbus registers/BACnet objects. Thanks to the Smart Plug™ interfaces, installation is fast and simple, while daisy-chain connectivity ensures flexible system expansion. The device fits most standard European junction boxes and can be easily installed using a wall back box.
